MUNEHISA HOMMA

THE LEGACY BEHIND PRICE ACTION

WHO HE WAS

Munehisa Homma was an eighteenth-century Japanese rice merchant. He became famous for studying price movement, crowd emotion and the repeating behaviour of buyers and sellers.

HISTORICAL NOTE

Homma is strongly associated with the early development of Japanese market analysis. Modern chart patterns were developed over time by many traders, so this book is inspired by his legacy rather than claiming he invented every pattern.

CORE IDEA

Markets are moved not only by price, but also by human emotion. Fear, confidence, hesitation and greed often create repeating structures.

HOW THIS HANDBOOK ADAPTS THE LEGACY

1 SIMPLIFIED LINE CHARTS

Complex market movement is reduced to clean lines so the structure is easier to recognise.

2 CLEAR DIRECTION LABELS

Each example identifies whether the confirmed move points Higher or Lower for chart-study purposes.

3 ENTRY CONFIRMATION

The diagrams emphasise waiting for a break, rejection, reclaim or retest instead of guessing early.

4 MARKET PSYCHOLOGY

Every pattern explains what buyers and sellers may be doing behind the visible shape.

EDUCATIONAL USE ONLY

This page explains historical influence and chart-reading concepts. It does not promise results or provide a guaranteed trading method. Practise only in a supervised educational or demo environment.

HOW TO READ THE DIAGRAMS

1

WHITE PRICE LINE

Shows the simplified price movement.

2

GREEN / RED LEVELS

Mark support, resistance, neckline or pattern boundaries.

3

BREAKOUT ARROW

Shows where confirmation occurs.

4

HIGHER / LOWER

Shows the expected direction after confirmation.

5

TWO SETUPS PER PAGE

Each setup includes psychology, entry, confirmation, avoid and pro tip.

IMPORTANT

A 5-second expiry is highly sensitive to timing, volatility and broker price feeds. Use these diagrams to learn market structure, practise on demo, and never treat a pattern as guaranteed.

Suggested expiries vary by setup: 5, 7 or 10 seconds.

01 DOUBLE TOP

DIRECTION: **LOWER**

SUGGESTED EXPIRY: **7 SECONDS**

• PSYCHOLOGY

Price fails to break resistance twice. Buyers lose strength and sellers begin taking control.

• ENTRY

Enter LOWER only after price breaks and closes below the neckline.

• CONFIRMATION

Strong bearish movement below the neckline.

• AVOID WHEN

Avoid during a strong uptrend or high-impact news.

★ PRO TIP

The cleaner the two peaks, the easier the pattern is to recognise.

02 DOUBLE BOTTOM

DIRECTION: **HIGHER**

SUGGESTED EXPIRY: **7 SECONDS**

• PSYCHOLOGY

Price tests support twice and fails to continue lower. Buyers begin stepping in.

• ENTRY

Enter HIGHER after price breaks and closes above the neckline.

• CONFIRMATION

Strong bullish movement above the neckline.

• AVOID WHEN

Avoid during a strong downtrend or high-impact news.

★ PRO TIP

Both bottoms should form around the same support zone.

03 HEAD AND SHOULDERS

DIRECTION: **LOWER**

SUGGESTED EXPIRY: **10 SECONDS**

- **PSYCHOLOGY**

The head forms higher than both shoulders, but buyers cannot maintain control.

- **ENTRY**

Enter LOWER after the neckline breaks with clear downside momentum.

- **CONFIRMATION**

Right shoulder remains below the head and neckline breaks.

- **AVOID WHEN**

Avoid when the shoulders are unclear or the neckline is weak.

PRO TIP

A visible head and balanced shoulders make the setup easier to trust.

04 INVERSE HEAD AND SHOULDERS

DIRECTION: **HIGHER**

SUGGESTED EXPIRY: **10 SECONDS**

- **PSYCHOLOGY**

The head forms lower than both shoulders, but sellers cannot maintain control.

- **ENTRY**

Enter HIGHER after price breaks above the neckline.

- **CONFIRMATION**

Right shoulder holds and bullish momentum clears the neckline.

- **AVOID WHEN**

Avoid when the pattern is uneven or forms in random choppy movement.

PRO TIP

The best examples have a clear neckline and strong final breakout.

05 TRIPLE TOP

DIRECTION: **LOWER**

SUGGESTED EXPIRY: **10 SECONDS**

• PSYCHOLOGY

Price is rejected from the same resistance area three times.

• ENTRY

Enter LOWER after the support between the peaks breaks.

• CONFIRMATION

Third rejection is followed by strong selling pressure.

• AVOID WHEN

Avoid if the three peaks are spread too far apart.

★ PRO TIP

Repeated rejection at one level shows strong resistance.

06 TRIPLE BOTTOM

DIRECTION: **HIGHER**

SUGGESTED EXPIRY: **10 SECONDS**

• PSYCHOLOGY

Price is rejected from the same support area three times.

• ENTRY

Enter HIGHER after resistance between the bottoms breaks.

• CONFIRMATION

Third rejection is followed by strong buying pressure.

• AVOID WHEN

Avoid if support is sloping sharply rather than remaining clear.

★ PRO TIP

Three clean reactions strengthen the visual structure.

07

RISING WEDGE REVERSAL

DIRECTION: **LOWER**

SUGGESTED EXPIRY: **7 SECONDS**

- **PSYCHOLOGY**

Price rises, but each swing becomes smaller as momentum weakens.

- **ENTRY**

Enter LOWER after price breaks beneath the lower wedge boundary.

- **CONFIRMATION**

A decisive lower break with increasing momentum.

- **AVOID WHEN**

Avoid if price breaks upward instead or the wedge is too wide.

★ **PRO TIP**

Narrowing swings are the key feature.

08

FALLING WEDGE REVERSAL

DIRECTION: **HIGHER**

SUGGESTED EXPIRY: **7 SECONDS**

- **PSYCHOLOGY**

Price falls, but each sell-off becomes smaller as sellers lose strength.

- **ENTRY**

Enter HIGHER after price breaks above the upper wedge boundary.

- **CONFIRMATION**

Clear bullish break with momentum.

- **AVOID WHEN**

Avoid if the breakout is weak or immediately rejected.

★ **PRO TIP**

The tighter the compression, the clearer the eventual release.

09

ROUNDED TOP

DIRECTION: **LOWER**

SUGGESTED EXPIRY: **10 SECONDS**

- **PSYCHOLOGY**

Buying pressure fades gradually and the market turns from accumulation to distribution.

- **ENTRY**

Enter LOWER after local support breaks.

- **CONFIRMATION**

Price accelerates lower after the rounded structure completes.

- **AVOID WHEN**

Avoid if the curve is too flat or has no clear support.

★ **PRO TIP**

This pattern forms slowly, so do not rush the entry.

10

ROUNDED BOTTOM

DIRECTION: **HIGHER**

SUGGESTED EXPIRY: **10 SECONDS**

- **PSYCHOLOGY**

Selling pressure fades gradually and buyers begin taking control.

- **ENTRY**

Enter HIGHER after local resistance breaks.

- **CONFIRMATION**

Price accelerates upward after the rounded base completes.

- **AVOID WHEN**

Avoid if there is no clean resistance level.

★ **PRO TIP**

The turn should look smooth rather than random.

11 BULL FLAG

DIRECTION: **HIGHER**

SUGGESTED EXPIRY: **5 SECONDS**

• PSYCHOLOGY

A strong rise pauses inside a small downward channel before buyers resume.

• ENTRY

Enter HIGHER after price breaks above the flag.

• CONFIRMATION

The breakout follows a clear bullish impulse.

• AVOID WHEN

Avoid when the initial move is weak or the flag is too large.

★ PRO TIP

The flag should be much smaller than the impulse.

12 BEAR FLAG

DIRECTION: **LOWER**

SUGGESTED EXPIRY: **5 SECONDS**

• PSYCHOLOGY

A strong fall pauses inside a small upward channel before sellers resume.

• ENTRY

Enter LOWER after price breaks below the flag.

• CONFIRMATION

The breakout follows a clear bearish impulse.

• AVOID WHEN

Avoid when the initial fall is weak or the pullback is too deep.

★ PRO TIP

A shallow flag usually shows stronger trend control.

13 BULLISH RECTANGLE

DIRECTION: **HIGHER**

SUGGESTED EXPIRY: **5 SECONDS**

- **PSYCHOLOGY**
Price pauses in a clear range after a bullish move.
- **ENTRY**
Enter HIGHER after resistance breaks.
- **CONFIRMATION**
Breakout leaves the box with visible momentum.
- **AVOID WHEN**
Avoid trading from the middle of the rectangle.

★ **PRO TIP** Wait for the edge of the range; do not guess inside it.

14 BEARISH RECTANGLE

DIRECTION: **LOWER**

SUGGESTED EXPIRY: **5 SECONDS**

- **PSYCHOLOGY**
Price pauses in a clear range after a bearish move.
- **ENTRY**
Enter LOWER after support breaks.
- **CONFIRMATION**
Breakout leaves the box with visible downside momentum.
- **AVOID WHEN**
Avoid entries while price remains inside the rectangle.

★ **PRO TIP** The cleanest trade comes after the boundary gives way.

15 BULL PENNANT

DIRECTION: **HIGHER**

SUGGESTED EXPIRY: **5 SECONDS**

• PSYCHOLOGY

A strong bullish move compresses into a small triangle.

• ENTRY

Enter HIGHER after the upper pennant line breaks.

• CONFIRMATION

The breakout follows the original bullish direction.

• AVOID WHEN

Avoid if the pennant becomes too wide or lasts too long.

★ **PRO TIP** Small, tight pennants are easier to read.

16 BEAR PENNANT

DIRECTION: **LOWER**

SUGGESTED EXPIRY: **5 SECONDS**

• PSYCHOLOGY

A strong bearish move compresses into a small triangle.

• ENTRY

Enter LOWER after the lower pennant line breaks.

• CONFIRMATION

The breakout follows the original bearish direction.

• AVOID WHEN

Avoid if the pennant becomes broad and choppy.

★ **PRO TIP** The compression should look controlled, not random.

17 ASCENDING TRIANGLE

DIRECTION: **HIGHER**

SUGGESTED EXPIRY: **7 SECONDS**

- **PSYCHOLOGY**

Higher lows press repeatedly against flat resistance.

- **ENTRY**

Enter HIGHER after resistance breaks.

- **CONFIRMATION**

Breakout closes above resistance instead of only touching it.

- **AVOID WHEN**

Avoid if the lower trendline is not rising.

★ **PRO TIP**

Pressure builds as pullbacks become shallower.

18 DESCENDING TRIANGLE

DIRECTION: **LOWER**

SUGGESTED EXPIRY: **7 SECONDS**

- **PSYCHOLOGY**

Lower highs press repeatedly against flat support.

- **ENTRY**

Enter LOWER after support breaks.

- **CONFIRMATION**

Breakout closes below support with strong momentum.

- **AVOID WHEN**

Avoid if the upper trendline is not falling.

★ **PRO TIP**

Repeated pressure weakens the support level.

19 SYMMETRICAL TRIANGLE

DIRECTION: **BREAKOUT**

SUGGESTED EXPIRY: **7 SECONDS**

• PSYCHOLOGY

Buyers and sellers compress price into a narrowing structure.

• ENTRY

Trade only after price clearly breaks one side.

• CONFIRMATION

Use HIGHER for an upper break and LOWER for a lower break.

• AVOID WHEN

Avoid predicting direction before the breakout.

★ PRO TIP

The entry comes after confirmation, not inside the triangle.

20 EXPANDING TRIANGLE

DIRECTION: **BREAKOUT**

SUGGESTED EXPIRY: **10 SECONDS**

• PSYCHOLOGY

Swings widen as volatility increases and control changes repeatedly.

• ENTRY

Wait for a decisive break beyond the expanding boundary.

• CONFIRMATION

Trade only when price escapes clearly with momentum.

• AVOID WHEN

Avoid early entries because the swings can be unpredictable.

★ PRO TIP

This is a volatile pattern; patience matters.

21 ASCENDING CHANNEL

DIRECTION: **HIGHER**

SUGGESTED EXPIRY: **5 SECONDS**

- **PSYCHOLOGY**

Price forms higher highs and higher lows inside a rising channel.

- **ENTRY**

Enter HIGHER near channel support after a clear bounce.

- **CONFIRMATION**

The bounce should align with the existing trend.

- **AVOID WHEN**

Avoid entries near the top boundary after price is extended.

★ **PRO TIP** Buy the pullback, not the top of the channel.

22 DESCENDING CHANNEL

DIRECTION: **LOWER**

SUGGESTED EXPIRY: **5 SECONDS**

- **PSYCHOLOGY**

Price forms lower highs and lower lows inside a falling channel.

- **ENTRY**

Enter LOWER near channel resistance after a clear rejection.

- **CONFIRMATION**

The rejection should align with the existing downtrend.

- **AVOID WHEN**

Avoid entering near the lower boundary after a large fall.

★ **PRO TIP** Sell the pullback, not the bottom of the channel.

23 RANGE BREAKOUT

DIRECTION: **BREAKOUT**

SUGGESTED EXPIRY: **7 SECONDS**

- **PSYCHOLOGY**
Price builds energy inside a range before leaving it.
- **ENTRY**
Trade in the direction of the confirmed range break.
- **CONFIRMATION**
The breakout should close outside the range.
- **AVOID WHEN**
Avoid small spikes that immediately return inside.

★ **PRO TIP** A real breakout stays outside the box.

24 FALSE BREAKOUT

DIRECTION: **REVERSAL**

SUGGESTED EXPIRY: **5 SECONDS**

- **PSYCHOLOGY**
Price briefly breaks a level, attracts entries, then quickly returns.
- **ENTRY**
Trade back into the range after the false break is confirmed.
- **CONFIRMATION**
Price closes back below resistance or above support.
- **AVOID WHEN**
Avoid entering while price is still outside and unconfirmed.

★ **PRO TIP** The rejection back into the range is more important than the spike.

25

LIQUIDITY SWEEP LOW

DIRECTION: **HIGHER**SUGGESTED EXPIRY: **5 SECONDS**

- **PSYCHOLOGY**

Price moves below an old low, collects liquidity, then rapidly recovers.

- **ENTRY**

Enter HIGHER after price reclaims the old low.

- **CONFIRMATION**

Fast rejection and return above support.

- **AVOID WHEN**

Avoid if price remains below the swept low.

★ **PRO TIP**

The reclaim is the confirmation; the sweep alone is not enough.

26

LIQUIDITY SWEEP HIGH

DIRECTION: **LOWER**SUGGESTED EXPIRY: **5 SECONDS**

- **PSYCHOLOGY**

Price moves above an old high, collects liquidity, then rapidly rejects.

- **ENTRY**

Enter LOWER after price falls back below the old high.

- **CONFIRMATION**

Fast rejection and return below resistance.

- **AVOID WHEN**

Avoid if price holds above the swept high.

★ **PRO TIP**

Wait for the reclaim below resistance before entering.

27 BREAK AND RETEST HIGHER

DIRECTION: **HIGHER**

SUGGESTED EXPIRY: **10 SECONDS**

• PSYCHOLOGY

Resistance breaks, then becomes support during the retest.

• ENTRY

Enter HIGHER after the retest holds and price turns upward.

• CONFIRMATION

A clear bounce from the former resistance.

• AVOID WHEN

Avoid if price falls back below the level.

★ PRO TIP

The retest gives a cleaner entry than chasing the first breakout.

28 BREAK AND RETEST LOWER

DIRECTION: **LOWER**

SUGGESTED EXPIRY: **10 SECONDS**

• PSYCHOLOGY

Support breaks, then becomes resistance during the retest.

• ENTRY

Enter LOWER after the retest rejects and price turns downward.

• CONFIRMATION

A clear rejection from the former support.

• AVOID WHEN

Avoid if price moves back above the level.

★ PRO TIP

Wait for the retest instead of chasing the first drop.

29 THREE PUSH REVERSAL HIGH

DIRECTION: **LOWER**

SUGGESTED EXPIRY: **7 SECONDS**

• PSYCHOLOGY

Three upward pushes lose strength and indicate possible exhaustion.

• ENTRY

Enter LOWER after market structure breaks.

• CONFIRMATION

Each push shows less progress and the final drop is decisive.

• AVOID WHEN

Avoid if the third push accelerates strongly upward.

★ PRO TIP

Weakening progress matters more than perfect symmetry.

30 THREE PUSH REVERSAL LOW

DIRECTION: **HIGHER**

SUGGESTED EXPIRY: **7 SECONDS**

• PSYCHOLOGY

Three downward pushes lose strength and indicate possible seller exhaustion.

• ENTRY

Enter HIGHER after market structure breaks.

• CONFIRMATION

Each push shows less progress and the final rise is decisive.

• AVOID WHEN

Avoid if the third push accelerates strongly downward.

★ PRO TIP

Look for weakening selling pressure before the break.

FINAL TRADING CHECKLIST

1

Identify the complete pattern before considering an entry.

2

Wait for the breakout, reclaim, rejection or retest shown in the diagram.

3

Avoid major news and unclear sideways movement.

4

Use a demo account before trading very short expiries.

5

Set a fixed session loss limit and never chase losses.

6

Focus on a few patterns until you can recognise them quickly.

TRADE PATTERNS, NOT EMOTIONS.

Trading involves risk. No setup guarantees a winning result.
